

Technical Data Sheet

Ultrafuse PLA

Date / Revised: 14.11.2019

Version No.: 4.2

General information

Components

Polylactic acid based filament for Fused Filament Fabrication.

Product Description

PLA is one of the most used materials for 3D printing. Ultrafuse PLA is available in a wide range of colors. The glossy feel often attracts those who print display models or items for household use. Many appreciate the plant-based origin of this material. When properly cooled, PLA has a high maximum printing speed and sharp printed corners. Combining this with low warping of the print makes it a popular plastic for home printers, hobbyists, prototyping and schools.

Delivery form and warehousing

Ultrafuse PLA filament should be stored at 15 - 25°C in its originally sealed package in a clean and dry environment. If the recommended storage conditions are observed the products will have a minimum shelf life of 12 months.

Product safety

Recommended: Process materials in a well ventilated room, or use professional extraction systems. For further and more detailed information please consult the corresponding material safety data sheets.

Notice

The data contained in this publication are based on our current knowledge and experience. In view of the many factors that may affect processing and application of our product, these data do not relieve processors from carrying out their own investigations and tests; neither do these data imply any guarantee of certain properties, nor the suitability of the product for a specific purpose. Any descriptions, drawings, photographs, data, proportions, weights etc. given herein may change without prior information and do not constitute the agreed contractual quality of the product. It is the responsibility of the recipient of our products to ensure that any proprietary rights and existing laws and legislation are observed.

Recommended 3D-Print processing parameters

Nozzle Temperature	210 – 230 °C / 410 – 446 °F
Build Chamber Temperature	-
Bed Temperature	50 – 70 °C / 122 – 158 °F
Bed Material	Glass
Nozzle Diameter	≥ 0.4 mm
Print Speed	40 - 80 mm/s

Drying Recommendations

Drying recommendations to ensure printability	60 °C in a hot air dryer or vacuum oven for 4 to 16 hours
---	---

Please note: To ensure constant material properties the material should always be kept dry.

General Properties

Standard

Printed Part Density	1248 kg/m ³ / 77.9 lb/ft ³	ISO 1183-1
